

SEPTIC TANK TREATMENT LIQUID

USE UNDILUTED: After initial shock dose, 1-2 L per month

Understanding your Septic System:

If you are like most people, you know very little about your septic system. This is understandable. In urban and suburban areas there are sewers to carry household waste to municipal wastewater treatment plants. In more rural areas, however, septic tank systems provide the functions of both sewers and treatment plants. The definition of a septic tank, is a tank in which waste matter is decomposed through bacterial action. Septic Tank Treatment replenishes and boosts the supply of these valuable microorganisms and allows natural activity to continue.

If you could look inside your septic tank, you would find three layers. The top layer is the scum layer where organic material floats to the surface. Bacteria in the septic tank biologically convert this material to a liquid. The middle layer is the effluent layer where mostly clear water will be found. This clear water is the only layer that should enter your absorption area. The bottom layer is the sludge layer. This is the layer is where the inorganic or inert solid materials and the by-products of bacterial digestion sink. All household waste is disposed of through the septic system. The proper operation of the septic is essential to health, property value, and the ecology. A small commitment to the care of your septic system will protect you from the nightmare created by a failing system.

ABOUT

Innovative microbial product using naturally occurring bacteria and enzymes, offering a complete solution to all the common problems associated with septic tanks and cesspools. Septic Tank Treatment effectively breaks down waste helping prevent blockages, reducing odours and aids the digestion of fats, oils and greases. It also reduces sludge build-up, which means fewer pump outs of the septic tank.

TANK SIZE INITIAL DOSAGE & MAINTENANCE:

2-3 m³ shock dose of 1L per day for 4 days then 1L per month

5-10 m³ shock dose of 2L per day for 4 days then 2L per month

Re-shock dose on any system that has been untreated for more than 1 month

INFORMATION:

Plate count 5billion/gram

Nutrient content biological micronutrients, biological enhancers, surfactants and stimulants

PACK SIZES: 1Litre & 5Litre

ADAVANTAGES:

- Reduces frequent pumping of septic tanks
- Extends life of drain area
- Controls methane production
- Improves drain field percolation
- Keeps sewer lines open
- Neutralises detergent bleach
- Prevents drain blockage
- Will not attack plastic or metal plumbing
- Safer to use than harsh chemicals
- Degrades waste faster
- Degrades paper, grease and vegetable waste
- Can be introduced through sinks, lavatories, or drains

STORAGE & HANDLING:

DO NOT FREEZE! Store upright in original container in a cool dry location. Avoid excessive skin contact.

PRECAUTIONS: Always dilute a fresh batch for each dose, do not store diluted product

Keep out of reach of children.

If swallowed consult a doctor and show the container or label.

CLASSIFICATION: Non-hazardous.

CLP: Not Classified. None required.

PACKAGING: Container, lid and label recyclable.
