

LIVOS for Cork

Cork

Cork is a renewable raw material - it comes from the rind of the Cork Oak, which is harvested every 10 years and always rebuilds it completely new. When the cork granules are mixed with natural resin, the result is a product which is 100% natural - soundproof, foot-warm, elastic and easy to care for.

LIVOS offers toxic free products, from bonding over coating to cleaning and maintaining - environmentally friendly, health conscious and of the highest quality, so that you will have long-term joy with your cork surface.

The treatment of the cork surface usually consists of three coats of natural resin oil such as **ALBANTO Natural Cork Finish**. This sealer penetrates deep into the surface and builds up a layer that is water and dirt resistant. For more color it ought to be primed with a suitable product (see reverse).

While in wet rooms only the Natural Cork Finish can be used, an extra finish with a wax, e.g. with **BIVOS Oil Wax** No. 375, is possible in the other rooms. The result is a satin glossy finish that is anti-static and therefore helps to reduce the dust exposure. Most of the Cork products have an intensive smell and therefore we do not recommend treatments with the almost odorless **LIVOS** neutral range of products.

On the reverse side, you will find an overview of the **LIVOS** products and their combination possibilities that are particularly suitable for Cork surfaces. For further information, please read our Technical Data Sheets, contact your **LIVOS** retailer or contact us directly. You can also visit our website www.livos.de or call our hotline +49(0)5825-8830.
